

# Fullcircle Furniture

Partially funded by a grant from the Wisconsin Department of Natural Resources, Madison Environmental Group is exploring the feasibility of a **business solution** to divert building materials from our landfills. Breathing new life into commercial doors solves a problem and satisfies a market need for **environmentally friendly products**. Innovative business models like Fullcircle Furniture would provide **new jobs** for Wisconsin while reducing pressure on landfills, using less raw material, and creating greener, healthier interiors. Contact Christi Weber at (608)280-0800 or [christi.weber@madisonenvironmental.com](mailto:christi.weber@madisonenvironmental.com) for more information.

The Fullcircle Furniture prototypes below are made from doors destined for the landfill.

The **Small Table** (*far left*) is made from half of a door.

The **Large Table** (*left*) is made from a whole door.

Both tables are constructed using sustainably harvested/locally grown birch, natural linoleum, and finished with a blend of linseed oil, beeswax and carnuba wax.

The **Wood Table and Benches** (*far left*) are made from two doors and sustainably harvested/locally grown birch.

The **Table on Casters** (*left*) is made from half of a door and stainless steel.

Both tables and the benches are finished with non-toxic products from AFM Safecoat.

The **Coffee Table** (*far left*) plus **Console** (*left*) are made from one door and stainless steel.

Both pieces are constructed using stainless steel and finished with a non-toxic product from AFM Safecoat.
